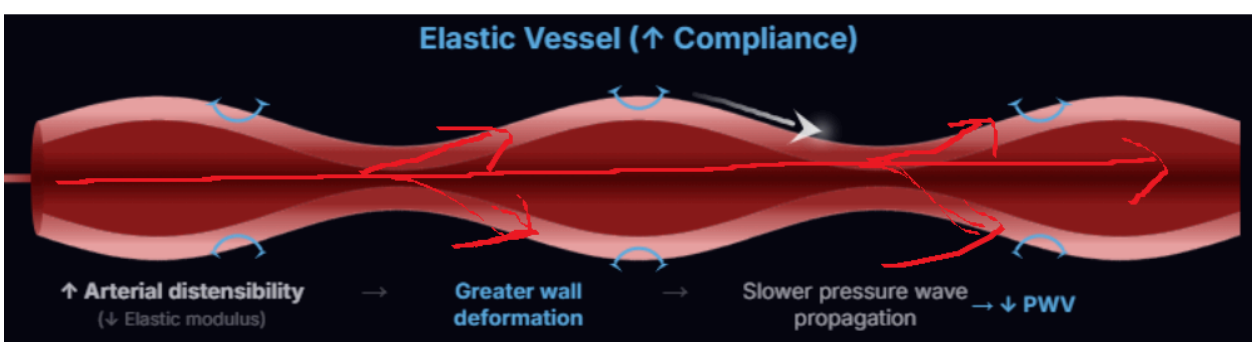
- For the cover page: change “This website is a supplemental academic companion to the poster presented at the Heart of the City Cardiovascular Symposium (Cleveland Clinic Florida).” to “This website is a supplemental academic companion to the poster”. Because I may reuse the website for another conference too.
- I think we can remove the “background” and “conclusion” page, it’s already talked about on the poster
- For the PWV basics, everything looks great, more clean. The “distance” explanation was used to explain the concept more simply, but the true mechanism is explained by the following:

  <u>Moens–Korteweg equation:</u>

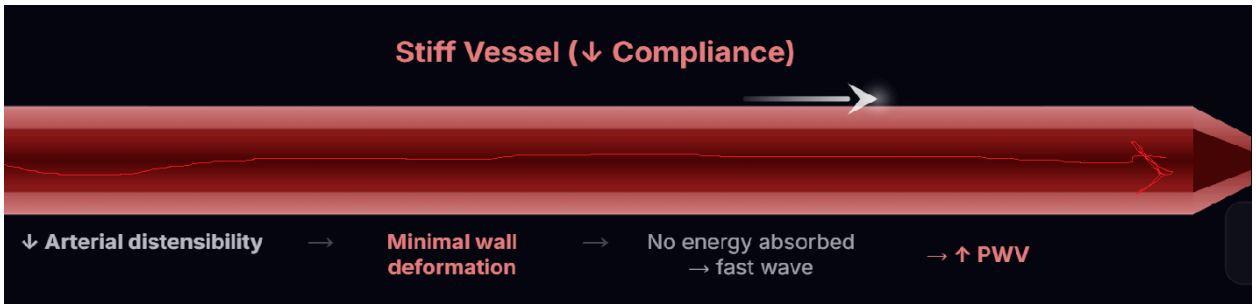
  $$PWV \approx \sqrt{\frac{Eh}{2\rho r}}$$

  E = elastic modulus / stiffness of vessel wall
  h = wall thickness
  ϱ = blood density
  r = vessel radius
  As E in the vessel wall increases, PWV increases

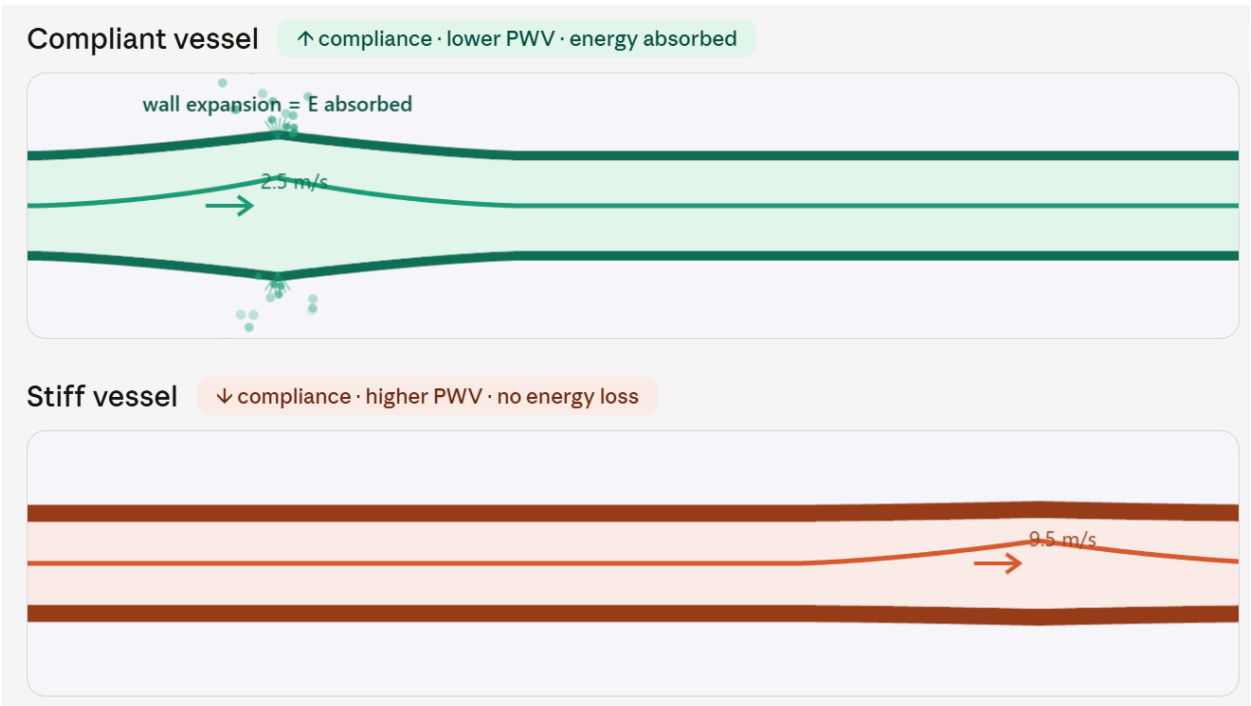
  Let’s add that somewhere in the page
- Also let’s remove the “wall relaxation” thing on the compliant vessel. Near “wall expansion” let’s add “ = E absorbed”
- If it’s possible, let’s keep the previous model for the compliant vessel. But let’s show if possible, the wave traveling inside the vessel, and losing energy and dissipating, where the wall expands. The wave traveling inside the vessel needs to decelerate as it travels inside the vessel.



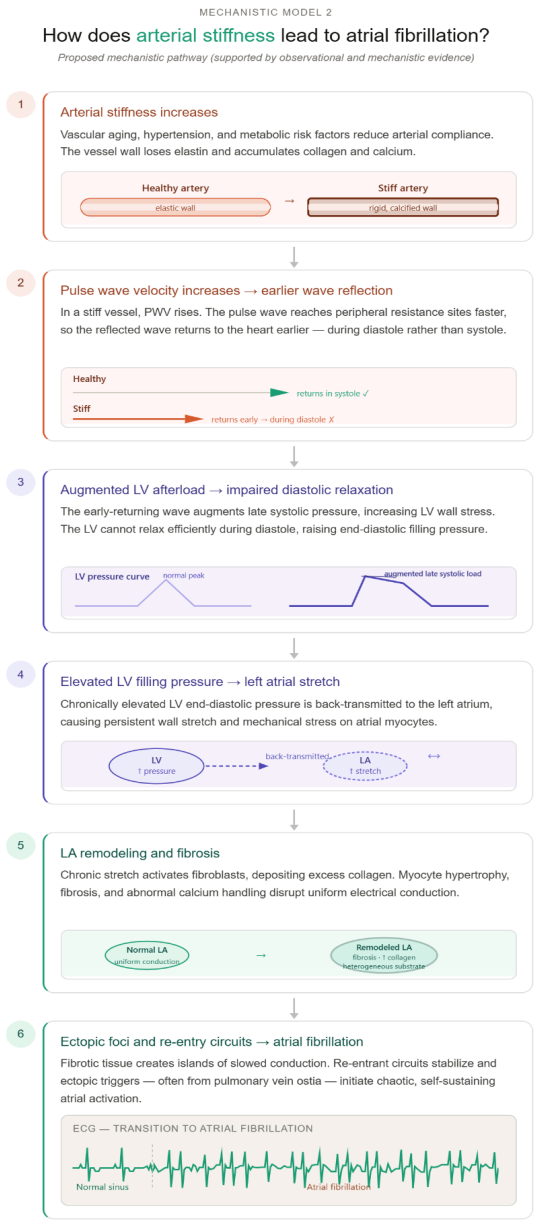
- Let’s do the same for the stiff vessel, but this time showing no loss of energy.



- More like something like that, but still keeping the speed on the right side, just like you did:



- From the AS to AF, I want something that looks like more like the following, it shows the sequence of events more clearly.



- For the “Evidence” page, rename it as “Results”, and remove the mention of “Discussion”
- Rename “PWV Basics” with “PWV & Arterial Stiffness”
- Rename “AS -> AF” with “Arterial Stiffness -> AF”

The rest is amazing, thank you!
